Planning your trip

Winter days are short and roads can change quickly. A little planning makes the trip safer and easier.

Before you go

- Check the weather, road conditions and the area notices in this package.
- Measure your ceiling height and the space for the tree, and bring a tape measure.
- Pack a hand saw, rope, a tarp, gloves, chains, a shovel, water and warm clothes.
- Tell someone where you are going and when you expect to be back.

At the cutting area

- Leave by early afternoon so you are out before dark.
- Cut close to the ground and take the whole tree, including the top.
- Attach a haul tag to the trunk before you move the tree, if your permit includes tags.
- Keep the tree wrapped while driving so branches do not break.
